In most cases, nuisance dusts masks provide adequate protection. Product Safety Care should be taken to avoid accidental mixing of quicklime and water (in any form, including chemicals containing water of hydration) to avoid creating excessive heat. 23. *We have not identified any alternate source of raising the funds required for our ‘Objects of the Issue’. Any shortfall in raising / meeting the same could adversely affect our growth plans, operations and financial performance.*

Our Company has not identified any alternate source of funding and hence any failure or delay on our part to mobilize the required resources or any shortfall in the Issue proceeds can adversely affect our growth plan and profitability. We depend on transportation services to deliver our products from our manufacturing facilities to our customers. We rely on third parties to provide such services. Disruptions of transportation services because of weather related problems, strikes, lock-outs, inadequacies in road infrastructure or other events could impair our procurement of raw materials and our ability to supply our products to our customers which in turn may adversely affect our business operations and our financial conditions.

27. We have experienced negative cash flows in previous years / periods. Any operating losses or negative cash flow in the future could adversely affect our results of operations and financial condition.

Our Company had negative cash flows from our operating activities, investing activities as well as financing activities in the previous years as per the Restated Financial Statements and the same are summarized as under.

(Rs. In Lacs)

Particulars	For the period ended on January 31, 2018	For the year ended on March 31,				
		2017	2016	2015	2014	2013
Net Cash Generated from Operating Activities	212.93	207.08	(179.76)	363.24	208.81	99.42
Net Cash Generated From Investing Activities	(20.01)	(117.22)	(93.30)	(108.00)	(480.01)	(11.73)
Net Cash Generated from Financing Activities	(189.87)	(92.07)	273.10	(259.74)	276.64	(97.01)

Cash flow of a Company is a key indicator to show the extent of cash generated from operations to meet capital expenditure, pay dividends, repay loans and to make new investments without raising finance from external resources. Any operating losses or negative cash flows could adversely affect our results of operations and financial conditions. If we are not able to generate sufficient cash flows, it may adversely affect our business and financial operations.

Lime, particularly quicklime, is an alkaline material that is reactive in the presence of moisture. Workers handling lime must be trained and wear proper protective equipment.

Skin Hazards—Lime can cause irritation and burns to unprotected skin, especially in the presence of moisture. Prolonged contact with unprotected skin should be avoided. Protective gloves and clothing that fully covers arms and legs are recommended. Particular care should be exercised with quicklime because its reaction with moisture generates heat capable of causing thermal burns.

Inhalation Hazards—Lime dust is irritating if inhaled. In most cases, nuisance dusts masks provide adequate protection. In high exposure situations, further respiratory protection may be appropriate, depending on the concentration and length of exposure (consult MSDS for applicable exposure limits).

Product Safety Care should be taken to avoid accidental mixing of quicklime and water (in any form, including chemicals containing water of hydration) to avoid creating excessive heat. Heat released by this reaction can ignite combustible materials or cause thermal damage to property or persons. Lime dust can be removed from vehicles using rags dampened with dilute vinegar. First Aid the Material Safety Data Sheet (MSDS) for the specific lime product should always be consulted for detailed first aid information. The following guidelines are general in nature. If lime comes in contact with the eyes, they should first be flushed with large amounts of water. Seek medical attention immediately after administering first aid. For inhalation, remove exposed person to fresh air. Seek medical attention immediately after administering first aid. Further, there is no assurance that they are stated or compiled on the same basis or with the same degree of accuracy, as the case may be, elsewhere.

13. *Conditions in the Indian securities market may affect the price or liquidity of our Equity Shares*

The Indian securities markets are smaller than securities markets in more developed economies and the regulation and monitoring of Indian securities markets and the activities of investors, brokers and other participants differ, in some cases significantly, from those in the more developed economies. Indian stock exchanges have in the past experienced substantial fluctuations in the prices of listed securities. Further, the Indian stock exchanges have experienced volatility in the recent times. The Indian stock exchanges have also experienced problems that have affected the market price and liquidity of the securities of Indian companies, such as temporary exchange closures, broker defaults, settlement delays and strikes by brokers. In addition, the governing bodies of the Indian stock exchanges have from time to time restricted securities from trading and limited price movements. A closure of, or trading stoppage on the SME Platform of BSE could adversely affect the trading price of the Equity Shares

14. *Any downgrading of India’s sovereign rating by an independent agency may harm our ability to raise financing*

Any adverse revisions to India's credit ratings for domestic and international debt by international rating agencies may adversely impact our ability to raise additional financing, and the interest rates and other commercial terms at which such additional financing may be available. This could have an adverse effect on our business and future financial performance, our ability to obtain financing for capital expenditures and the trading price of our Equity Shares

15. *Natural calamities could have a negative impact on the Indian economy and cause our Company's business to suffer*

India has experienced natural calamities such as earthquakes, tsunami, floods etc. in recent years. The extent and severity of these natural disasters determine their impact on the Indian economy. Prolonged spells of abnormal rainfall or other natural calamities could have a negative impact on the Indian economy, which could adversely affect our business, prospects, financial condition and results of operations as well as the price of the Equity Shares.

SECTION III

SUMMARY OF OUR INDUSTRY

GLOBAL SCENARIO

The pace of global economic activity in 2017 turned out to be stronger than expected due to robust growth in the advanced economies (AEs) and significantly stronger growth in EMEs. Global growth is expected to accelerate further in 2018, benefitting from the boost to investment demand in the US from corporate tax cuts, robust recovery in the euro area and generally improved growth outlook in EMEs (Chart I.2). The sharp recovery in world trade is expected to sustain in 2018 and enlarge the prospects of another year of strong and resilient global activity.

The US economy slowed in Q4:2017 on surging imports and depleting inventories, after growing at a robust pace in Q3 on the back of strong private consumption, investment activity and net exports. For the year 2017 as a whole, GDP grew at 2.3 per cent, accelerating from 1.5 per cent in the preceding year. Labour market conditions improved further with the unemployment rate falling to a low of 4.1 per cent. Industrial production also registered a robust growth driven largely by mining activity. These developments in conjunction with rising consumer confidence and higher disposable incomes due to tax cuts should support growth. However, the impact of the tax cuts on the fiscal balance and the ramifications from a potential trade war remain major risks to the outlook.

During H2:2017 and Q1:2018, global commodity price movements have largely reflected commodity specific demand-supply imbalances and the movement of the US dollar. The Bloomberg commodity index increased by 3.6 per cent during October to March 2018.

The food price index of the Food and Agriculture Organization (FAO) fell by 3.2 per cent on account of decline in prices of sugar and dairy products. International sugar prices, in particular, came under considerable downward pressure mostly because of record levels of output in major producing countries, which released substantial export surpluses. Crude oil prices surged by around 22 per cent over the last six months with Brent touching a three year high in January on strong demand riding the improving outlook for global economic activity, especially manufacturing and reduced supplies as cuts in production by OPEC and Russia offset the ramped up shale production in the US. The weak US dollar has also provided a fillip. Gold prices, which had started rising since mid-December due to the weak US dollar, fell to a two month low at the beginning of March on the outlook for the US economy turning brighter. However, safe haven demand triggered by fears of a trade war led to firming up of prices.

The composite PMI indicates economic growth remained robust across most economies in Q1:2018. The composite leading indicators (CLIs) of Organisation for Economic Co-operation and Development (OECD) point to prospects of growth strengthening in the euro area, Russia, Brazil and Japan, and remaining stable in the US and China.

Global economic activity has been witnessing a broadbased cyclical upturn. The acceleration in global trade outpacing global growth is a welcome development. Inflation remains below policy target levels in many key economies despite rise in some commodity prices and improving demand outlook, while monetary policy stances remain diverse. The recent volatility in financial markets stemming mainly from the uncertainty over the pace of normalisation of monetary policy in AEs could pose a challenge to the EMEs, while fears of rising trade protectionism have clouded the global trade outlook.

GLOBAL SCENARIO

The pace of global economic activity in 2017 turned out to be stronger than expected due to robust growth in the advanced economies (AEs) and significantly stronger growth in EMEs. Global growth is expected to accelerate further in 2018, benefitting from the boost to investment demand in the US from corporate tax cuts, robust recovery in the euro area and generally improved growth outlook in EMEs (Chart I.2). The sharp recovery in world trade is expected to sustain in 2018 and enlarge the prospects of another year of strong and resilient global activity.

The US economy slowed in Q4:2017 on surging imports and depleting inventories, after growing at a robust pace in Q3 on the back of strong private consumption, investment activity and net exports. For the year 2017 as a whole, GDP grew at 2.3 per cent, accelerating from 1.5 per cent in the preceding year. Labour market conditions improved further with the unemployment rate falling to a low of 4.1 per cent. Industrial production also registered a robust growth driven largely by mining activity. These developments in conjunction with rising consumer confidence and higher disposable incomes due to tax cuts should support growth. However, the impact of the tax cuts on the fiscal balance and the ramifications from a potential trade war remain major risks to the outlook.

During H2:2017 and Q1:2018, global commodity price movements have largely reflected commodity specific demand-supply imbalances and the movement of the US dollar. The Bloomberg commodity index increased by 3.6 per cent during October to March 2018.

The food price index of the Food and Agriculture Organization (FAO) fell by 3.2 per cent on account of decline in prices of sugar and dairy products. International sugar prices, in particular, came under considerable downward pressure mostly because of record levels of output in major producing countries, which released substantial export surpluses. Crude oil prices surged by around 22 per cent over the last six months with Brent touching a three year high in January on strong demand riding the improving outlook for global economic activity, especially manufacturing and reduced supplies as cuts in production by OPEC and Russia offset the ramped up shale production in the US. The weak US dollar has also provided a fillip. Gold prices, which had started rising since mid-December due to the weak US dollar, fell to a two month low at the beginning of March on the outlook for the US economy turning brighter. However, safe haven demand triggered by fears of a trade war led to firming up of prices.

The composite PMI indicates economic growth remained robust across most economies in Q1:2018. The composite leading indicators (CLIs) of Organisation for Economic Co-operation and Development (OECD) point to prospects of growth strengthening in the euro area, Russia, Brazil and Japan, and remaining stable in the US and China.

Global economic activity has been witnessing a broadbased cyclical upturn. The acceleration in global trade outpacing global growth is a welcome development. Inflation remains below policy target levels in many key economies despite rise in some commodity prices and improving demand outlook, while monetary policy stances remain diverse. The recent volatility in financial markets stemming mainly from the uncertainty over the pace of normalisation of monetary policy in AEs could pose a challenge to the EMEs, while fears of rising trade protectionism have clouded the global trade outlook.

Limestone reserves are adequate for most countries.

China is the largest producer. Technical know-how is easily available and most third world countries too produce adequate quantity of lime for their own consumption.

Globally, the lime industry is dominated by quicklime which covers nearly 76% of the demand while slaked lime has 21% and hydraulic lime only 3% share of the market.

The industry's prospects will strengthen over the next five years, reflecting a gradual recovery in the performance of downstream steelmaking and building markets. Demand for construction products is expected to recover extremely slowly, although the pace will increase as the economy picks up.

According to experts, strongest annual growth of lime is expected to come from China, India, US, Senegal and Panama and overall growth rate is expected at 4.3% over next 5 years.

GROWTH OF INDIAN ECONOMY

Economic activity is expected to gather pace in 2018-19, benefitting from a conducive domestic and global environment. First, the teething troubles relating to implementation of the GST are receding. Second, credit off-take has improved in the recent period and is becoming increasingly broad based, which portends well for the manufacturing sector and new investment activity. Third, large resource mobilization from the primary market could strengthen investment activity further in the period ahead. Fourth, the process of recapitalization of public sector banks and resolution of distressed assets under the Insolvency and Bankruptcy Code (IBC) may improve the business and investment environment. Fifth, global trade growth has accelerated, which should encourage exports and reduce the drag from net exports. Sixth, the thrust on rural and infrastructure sectors in the Union Budget could rejuvenate rural demand and also crowd in private investment for production, order books, capacity utilization, employment and profit margins.

In the March 2018 round of the Reserve Bank’s survey, professional forecasters expected real gross domestic product (GDP) growth to pick up marginally from 7.2 per cent in Q3:2017-18 to 7.3 per cent in Q1:2018-19 and remain at 7.2 per cent in Q2-Q4.

Taking into account the baseline assumptions, survey indicators and model forecasts, real GDP growth is projected to improve from 6.6 per cent in 2017-18 to 7.4 per cent in 2018-19 – 7.3 per cent in Q1, 7.4 per cent in Q2, 7.3 per cent in Q3 and 7.6 per cent in Q4 – with risks evenly balanced around this baseline path, For 2019-20, the structural model estimates indicate real GDP growth at 7.7 per cent, with quarterly growth rates in the range of 7.4-7.9 per cent, assuming a normal monsoon, and no major exogenous/policy shocks.

Mining and Marketing of Lime in India

In India, limestone mines are worked by opencast method. Captive mines are mechanised and supply feed to cement and iron & steel units. Some mines have well laid road-cum-rail routes and aerial ropeways. The large mines are developed by forming benches in overburden and limestone bed. The face length, width and height of the benches correspond to the mining machinery deployed and production schedule.

Limestone produced in Bihar is supplied mainly to cement plants, foundries and lime kiln units.

In Raipur and Durg districts of Chhattisgarh, the limestone produced is suitable for Iron & Steel Industry. The Bhilai Steel Plant obtains its requirements of limestone from Nandini mines in Durg district. The cement grade limestone is also produced in the region and there is large cluster of cement plants in and around Raipur.

Limestone produced in Gujarat is consumed mainly in cement and chemical industries and also in textile, foundries and steel plants. The dolomitic limestone in Gujarat is used for making slabs and tiles.

In Maharashtra, apart from cement and sugar industries, limestone is used in Ferro-manganese Industry as flux and also in Tanning Industry.

Limestone mined in Rajasthan is consumed in captive cement plants on a large scale. Limestone of Nagaur district is utilised as feed for white cement plants as well as in steel plants as low silica SMS grade flux and in chemical Industry. Crystalline limestone of Rajasthan is widely known as a decorative ornamental stone. The limestone worked in Bundi district and Raghunathgarh in Jaipur district is an excellent flagstone, for use as a paving stone.

Uses of Lime Stone in India

Limestone used for industrial purpose falls under 'major mineral', while the use of limestone in lime kilns and for building purposes comes under 'minor mineral' as per Mines and Minerals (Development and Regulation) Act, 1957.

The principal use of limestone is in the Cement Industry. Other important uses are as flux in metallurgical processes; in Glass, Ceramic, Paper, Textile and Tanning Industries; for manufacture of calcium carbide, alkali and bleaching powder; for water purification and sugar refining; in fertilizer (calcium ammonium nitrate) and as soil conditioning agent in agriculture; crushed stone for ballast and filler in concrete and asphalt; as rectangular slab in lithography. The whiting (chalk and precipitated limestone) is used as a filler in rubber, oil cloth, paint, cosmetic, tooth paste, shoe polish, etc. Limestone is also used in underground mine dusting to prevent the propagation of explosions.

Lime is prepared by heating limestone in kilns up to 1000°C. The CO₂ released is effluxed and 'quicklime' (CaO) formed remains as hard white lumps. This when slaked with water and mixed with sand, forms mortar or plaster. Commonly, the commercial lime is prepared as dry hydrated lime Ca(OH)₂ by adding to quicklime just the right amount of water (18 parts to 56 parts of CaO). The value of lime for most purposes depends upon its CaO (or CaO + MgO) content.

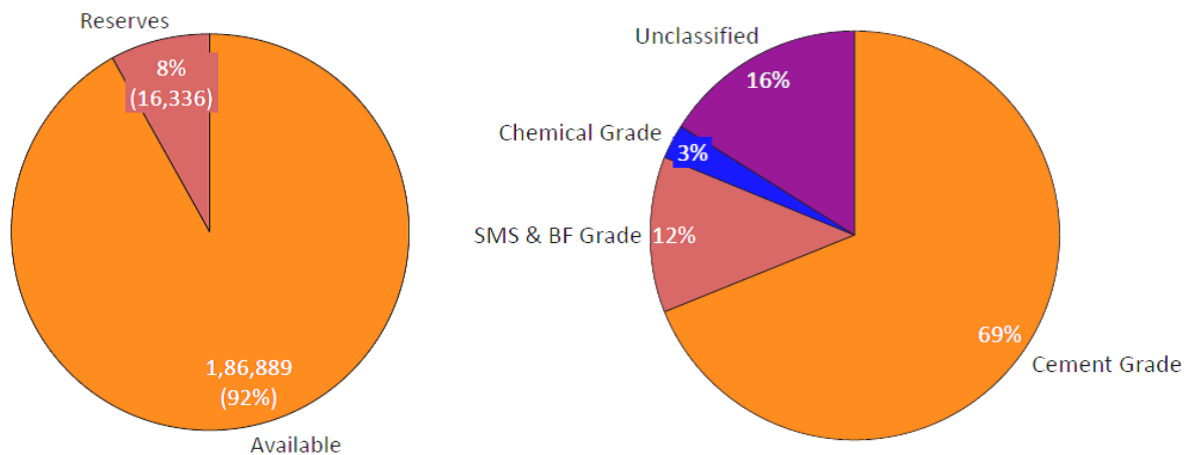

The manufacture of metallic calcium is one of the latest uses of lime. Calcium is used in reducing organic compounds, desulphurising petroleum, debismuthising lead production of hard lead alloys and calcium-silicon alloys, and in the manufacture of calcium hydride which is further used as an efficient hydrogen carrier.

Limeshell is used mainly in Chemical and White cement Industries. It is also used in the manufacture of polyfibre and in Tanning industry. Lime kankar is used in Cement Industry.

Limestone Reserves & Availability in India

Indian Reserves of Limestone - 203, 224 million tonnes as per UNFC convention:

India, has 203,224 million tonne reserves of limestone. Here, all types of calcereous materials of lime are considered which includes chalk, algae limestone, coral limestone, flagstone, marbles etc., Cement Grade is widely available followed by SMS & BF grade.

GSI and Mineral Exploration Corp of India is continuously conducting exploration activities for limestone. Especially concerted efforts are made to mine SMS & BF grade limestone for expanding steel sector

According to analysts, based on expected growth and consumption pattern in coming years, limestone reserves can last only upto 35-41 years.

Demand and Supply of Lime Consumption

Steel sector, the largest consumer of quick lime has a total steel production capacity of 37 million tonnes in BF-BOF route and 30 million tonnes in EAF route.

The BF-BOF route has an average capacity utilization of 79.35 % and is currently producing 29.36 million tonnes of steel which needs quicklime to the tune of 2.62 million (arrived by gross consumption of lime @ 90 kg per tonne of steel = 29.36 million x 90000 = 2.642 million) Steel Plants under BF/BOF route have captive lime kilns with rated capacity of 4.71 million tonnes (refer slide No. 80) and is producing the required 2.62 million tonnes. It also means with 100% capacity utilization, the quicklime demand will raise to 3.3 million which can be met from existing captive lime kilns.

With new green field and brown field expansion of steel plants the capacity in next 4-6 years in BF/BOF route is likely to reach 59 million tonnes. However, most of these steel expansion also include captive lime calcinations plants (refer slide No.82) which will add further capacity of 1.68 million tonnes in captive lime production.

With regards to EAF route, the rated steel production capacity is 29.85 million tonnes and with capacity utilization hovering around 70 %, the steel production in this route is slated at 20.97 million tonnes.

The major producers of steel in EAF route (Essar/Jindal/Bhushan/ JSW –Dolviwho have captive lime kilns) have a rated steel production capacity of 22.1 million tonnes and they produce 16.18 million tonnes of steel –which require lime to the tune of 1.45 million tonnes.

The rest of 4.79 million tonnes of steel made in EAF route is by smaller players -whose lime requirement is around 0.47 million tonnes which is met by merchant producers. With economy on growth path, the capacity utilization will reach 100% (7.71 million tonnes of steel will be produced)and new capacity expansions of (3 million tonnes) in this segment will produce steel of 10 million tonnes which will raise the merchant supply of lime from current 0.47 million tonnes to 1.0 million tonnes.

We have observed in the past, the smaller segment of players tend to capitalize well during boom period, and they tend to be aggressive in raising steel production /new plants /capturing market share than the larger players and hence we project an additional 3 million tonnes of steel production in this segment.

To sum up, with 100 % capacity utilization –the total steel production will reach 67 million tonnes (BF/BOF and EAF) and lime requirement by 6.03 million tonnes, which will be met by captive plant (5.31) and (0.72) from merchant plants.

With additional capacity expansion in the next 6 years (22 million tonnes in BF/BOF and 11 million in EAF), an additional 33 million tonnes of steel will be produced. This will raise the lime demand from current 6.03 million tonnes to 9 million tonnes. Of this –8 million tonnes requirement will be met by captive kilns while 1 million tonne will be supplied by merchant plants.

In the next 10 years, the expected demand of lime from steel sector is likely to reach 5.61 million from above projects. According to Ministry of Steel and other reports –the steel capacity is likely to reach 200 million tonnes by 2025 -which means lime demand of 18 million tonnes . It also means 80 to 90 lime kilns with 600 tons per day capacity will be installed only in steel plants in India in future.

Our Business Model:

Our Manufacturing product range includes:

- ✓ Quick lime
- ✓ Hydrated lime
- ✓ Limestone and Limestone Powder

Detailed description of the products of our company deals in are as follows:-

✓ **Quick lime**

<p>Quicklime is Calcium oxide, formed by calcining calcium carbonate (lime stone), so that carbon dioxide is liberated. A caustic substance that is prepared by burning calcium carbonate lime stone at approximately 900 degree Celsius, at this high temperatures carbon dioxide is driven off and the lime Stone is converted to Quicklime. CaO is a whitish, odourless alkaline substance, which does not dissolve well in water.</p> <p>Quicklime is created by heating limestone as shown in the following equation: Chemical formula: $\text{CaCO}_3 + \text{HEAT} = \text{CaO} + \text{CO}_2$</p> <p>Usage: It is used in water and waste water treatment operations such as softening. Major use is in various industrial processes like metal smelting, paper bleaching, sulphur neutralization in sugar etc. It can be used as a lining material..</p>

✓ **Hydrated Lime**

<p>Calcium hydroxide or hydrated lime is produced by adding water to unslaked lime according to the reaction :</p> $\text{CaO} + \text{H}_2\text{O} = \text{Ca}(\text{OH})_2$ <p>During this process heat is released and the unslaked lime doubles its volume. Hydrated lime is also known as slaked lime and is very fine dry powder.</p> <p>USAGE: Metallurgical Applications, Sugar Refinery, Water Treatment, Bleach Manufacture, Leather Tanning, Salt Production, Sewage Treatment, Sterilization, Fertilizer Manufacture, Lime Mortar, White Washing, Road Construction</p>

Trading Activities:

In addition to manufacturing activities company also trades in the following minerals:

- Quartzite Mineral
- Quick Lime Powder (AAC Grade)
- Plaster of Paris (POP)
- Calcined Magnesite Powder
- Dolomite Mineral

- **Quartzite Mineral:**

The parent rock for quartzite is quartz-rich sandstone. As sandstone becomes deeply buried, rising temperature will fuse the quartz grains together forming the extremely hard and weather-resistant rock quartzite. Like marble, quartzite comes in many colours, but when pure it is light-coloured.

Quartzite tends to have a sugary appearance, and when broken the fractures cut through the sand grains, not around them as with a sandstone.

Usage: Sand, which is composed of tiny Quartz pebbles, is the primary ingredient for the manufacture of glass. Transparent Rock Crystal has many electronic uses; it is used as oscillators in radios, watches, and pressure gauges. Quartz is also used as an abrasive for sandblasting, grinding glass, and cutting soft stones. Quartz is important in the production of soaps and ceramics. Transparent Rock Crystal is used in the study of optics. Quartz is essential in the computer industry, for the all-important silicon semiconductors are made from Quartz.

➤ Quick Lime Powder :

Quick Lime powder is processed from best quality raw limestone, using latest technology and high tech machinery.

Usage

- AAC block manufacturing
- Effluent treatment plant
- Road & building construction
- Paint & pigment as chemicals
- Lubricants & petroleum refinery

Plaster of Paris (POP):

Plaster of Paris is made up from gypsum. Plaster of Paris contains the calcium sulfate hemihydrates ($\text{CaSO}_4 \cdot 0.5 \text{H}_2\text{O}$). This is prepared by heating the gypsum which contains calcium sulfate dihydrate ($\text{CaSO}_4 \cdot 2\text{H}_2\text{O}$) to a temperature about 150°C ($120\text{--}180^\circ\text{C}$). Certain additives are added when heating. Plaster of Paris is a fine, white powder.

Usage: When it is hydrated it can be used to mould things, and when allowed to dry, it hardens and retains the shape it is set to before drying.

➤ Calcined Magnesite Powder:

The mineral magnesite which has been reduced to a powder by heating, i.e. calcined. It is used as a dietary supplement for cattle and sheep to prevent hypomagnesemia. Used for top dressing pasture with a similar objective.

Usage:

- Chemical Industries
- Metal Plant
- Alloys Industries
- Water treatment
- Rubber Industries
- Plastic Industries
- Animal feed Industries
- Fertilizer Industries

➤ **Dolomite Mineral :**

The mineral dolomite is commonly found in deposits of a sedimentary rock called dolostone. There are two types of materials often called dolomite, a true chemically uniform calcium magnesium carbonate with the chemical formula $\text{CaMg}(\text{CO}_3)_2$, and a dolomitic limestone, which is just an irregular mixture of calcium and magnesium carbonates.

The resultant dolomite mineral, $\text{CaMg}(\text{CO}_3)_2$ is a true double salt. The calcium and magnesium ions in dolomite exist in separate layers in the crystal matrix. Dolomite has a calcium layer, then a carbonate layer, then a magnesium layer then a carbonate layer, and so on.

Uses:

- Burnt/Calcined Dolomite is used for Refractory
- Dolomite is widely used in Iron & Steel Industries.
- Used as a substitute of lime for construction and building products
- White Dolomite powder as a filler for asphalt and concrete, paints, plastics, rubber, soaps and detergent applications
- Used in adhesive formulation
- Dolomite is also used in some cement, pharmaceutical, fodder, Glass and ceramic industry as a source of magnesium

Manufacturing Process Chart:

Manufacturing activities:

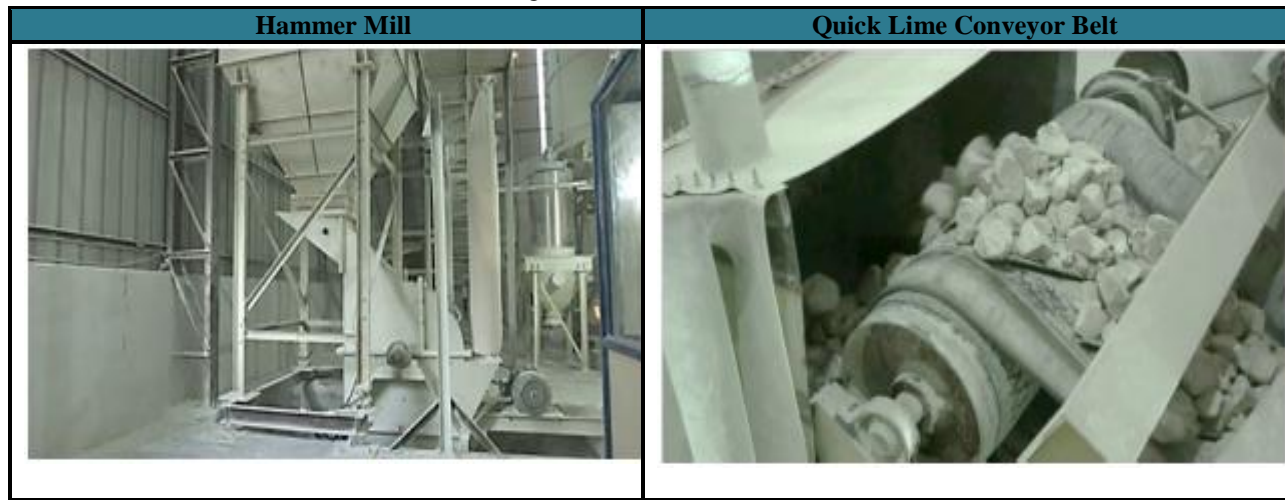

EXISTING MANUFACTURING PROCESS OF QUICK LIME POWDER & HYDRATED LIME:

- ❖ Our QC team tests the quality of raw material at the supplier sites located at Rajasthan. Once material passes our Quality Standard, we issue Purchase Order (PO) through Microsoft Dynamics ERP system. On the basis of PO supplier supply the material.
- ❖ The raw material truck is first positioned on HTU and quick lime lumps from the truck are unloaded mechanically on to a hopper without use of any labour, the truck will take only 30 minutes to unload the raw material.

- ❖ From the hopper, material passes through a conveyor belt to a 25 TPH capacity hammer mill, here the material is crushed into 0-3 mm size. The dust particle created during the crushing process is captured by the dust collector to ensure there is zero dusting.

- ❖ From the Hammer Mill the material is stored in Silo 1 & 2. From Silo 1 & 2, coarse quick lime is further crushed into fine powder in a 5 TPH grinding unit. The quick lime powder is then stored in Silo 3 & 4 and then loaded into Bulklers through loading bellows and Finished product is dispatched to customers in Bulklers.

PROPOSED MANUFACTURING PROCESS OF QUICK LIME POWDER & HYDRATED LIME:

- ❖ The raw material truck is first positioned on HTU and quick lime lumps from the truck are unloaded mechanically on to a hopper without use of any labor, the truck will take only 30 minutes to unload.
- ❖ From the hopper, material passes through a belt conveyor to a 25 TPH capacity hammer mill, here the material is crushed into 0-3 mm size. The dust particle created during the crushing process is captured by the dust collector to ensure there is zero dusting.
- ❖ From the Hammer Mill the material is stored in any of the four storage silos for further process. In Silos 1 & 2 materials is stored for producing multiple grade of Hydrated Lime through further processing and material stored in Silo 3 & 4 is used for producing quick lime powder. From Silo 3 & 4, coarse quick lime is further crushed into fine powder in a 5 TPH grinding unit. The quick lime powder stored in Silo 5 is ready to be dispatched to customers for construction industries & material from silo 6 is dispatched to customers for chemical industries.

Quick Lime Storage Silo

❖ From Silos 1 & 2, coarse quick lime is passed to 15 TPH capacity CIM-Hydrax. This is a three stage machine with specially designed hi-efficiency paddles to mix continuously the reacting lime & the water. Paddles have different design in the various hydrator stage for optimum matching of their specific operational performance. In the first stage, two high-speed shafts, equipped with an advanced multi-point water injection system for the most accurate control of the initial phase of the slaking process. Dust collected in this device is re-introduced in to first stage of CIM-Hydrax for processing.

The second stage strongly mixes the material, favoring the completion of reaction in the large volume of this second chamber which is approximately the double of the first one.

The third stage vigorously ventilates the hydrated lime to minimize any possible light agglomeration so that the hydrate coming out of the hydrator is of enhanced fineness. After the end of third stage in CIM-HYDRAX the material passes through CIM-MICROSE plus CIM-MICROCLON Separator-1.

- ❖ Here the raw material entering through the feed inlets is subject to centrifugal force, which uniformly distributes the material within the airstream. The ascending air flow pushes the material towards the multi-blade selecting cage. Pharma & Chemical industry grade Hydrated lime are then exhausted into the Silo 7 & 8, while the balance material is discharged by gravitational force through a cone for further processing.
- ❖ Coarse material separated from Separator-1 is passed through CIM-DISAGGLOMERATOR where the coarse material is further converted into fines. Material from CIM-DISAGGLOMERATOR are then passed through CIM-MICROSEP plus CIMMICROCLON Separator-2. After process like that of Separator-1, Cattle feed & Effluent Treatment PLANT (ETP) industry grade of hydrated lime (which is again 60% of the input material in separator-2) are then exhausted into the Silo 9 & 10. while the remaining Soil Stabilization & Steel industry grade of hydrated lime (which is 40% of the input material in separator-2) are discharged by gravitational force through a cone into Silo 11 & 12.

INFRASTRUCTURE FACILITIES FOR RAW MATERIAL, UTILITIES LIKE WATER, ELECTRICITY ETC.

RAW MATERIAL

- Our basic raw material is quick lime and as we are in this Industry since 2005, majority of suppliers are from Rajasthan who supplies raw materials as per our requirements and specifications.
- **Storage Facility:** - At present we have high capacity 4 Storage Silos installed at our existing Plant.

WATER

Water supply is being fulfilled through groundwater which is being extracted using bore well.

POWER

Our Company mitigates it's Power requirements from Dakshin Gujarat Vij Co. Limited which is around 250 KVA.

OTHER INFRASTRUCTURE FACILITIES

Our corporate office is situated at Surat, is well equipped with computer systems, internet connectivity, other communication equipment, security and other facilities, which are required for our business operations to function smoothly.

QUALITY MEASURES

We have in-house laboratory for ensuring various quality checks. All our products are tested at our laboratory on a continual basis. The raw materials procured from the best available sources undergo material testing prior to inducted in the production of finished products. Our laboratory is well equipped with all requisite equipments and the same is adapted with new conditions and technology whenever required. We have also ISO 9001-2015 for “Quality Management System” and ISO 14001-2015 “Environmental Management System . We believe in maintaining quality checks at each step so as to avoid inconsistencies in the finished product.

Further before dispatch the trucks/dumpers carrying our material are covered with Tarpaulin, these trucks/dumpers are sealed before dispatch. Where the material is dispatched in bulkers, we ensure that the same is dispatched in airtight condition so as to avoid contamination.

ENVIRONMENTAL CLEARANCES / EFFLUENT DISPOSAL/ POLLUTION

We have obtained GPCB consent. The details is as under:

Location	Consolidated Consent Order No.	Valid upto
Block No.238, Plot No.3 near Garden POY Plant, at Jolwa, Taluka, Palsana, District- Surat. For manufacturing of the 5500 MT/Month Quick Lime Powder	Consent Order No.: CTE-57256	Valid up to June 30, 2018

PACKING AND DISPATCH

We are packing our material in HDPE bags before loading on our loaders/truck and we procure HDPE bags from Bikaner, Rajasthan and are easily available. Further before dispatch the trucks/dumpers carrying our material are covered with Tarpaulin, these trucks/dumpers are sealed before dispatch. Where the material is dispatched in bulkers, we ensure that the same is dispatched in airtight condition so as to avoid contamination.

MARKETING AND DISTRIBUTION ARRANGEMENT

- As the Business model of our company is that of B2B (not B2C), we do not operate through any distributor.
- To tap up Rajasthan territory, we have one Branch in Rajasthan.
- Research & Mapping is our core strength and it’s a continuous process in our company. A dedicated Team is continuously engaged to anticipate market demand & consumption pattern of the customers.
- We have arrangements to supply materials through Bulkers (not in Jumbo Bags) which is our USP and it is by itself a marketing tool for us.

COMPETITION

We have a competitive edge over our supplies. Our competitors supply directly from Rajasthan and that too in Jumbo bags. But our Proposed plant at Panoli will be having 2 major USPs (unique selling proposition) as mentioned below:

- **Supply through Bulker :-** This ensures supply of Quality materials to the customers which other suppliers from Rajasthan cannot do. They supply in Jumbo bags which reduces the quality of material when the same reaches customers site. Also, this involves Packing cost at vendor end and Labour Cost (unloading) at customers end. Both the costs are saved if supplied through Bulkers.

- **Weight Inflation** :- At our proposed Panoli Plant, we will get an Inflation benefit wherein Input : Output ratio will be 1 Metric Ton : 1.33 Metric Ton. Due to this our effective Transportation cost from Rajasthan to Surat will be reduced.

Under the Industrial Policy, unless specifically restricted, foreign investment is freely permitted in all sectors of Indian economy up to any extent and without any prior approvals, but the foreign investor is required to follow certain prescribed procedures for making such investment.
